202.776.9066
The Voter Participation Center (VPC) is a 501(c)3 nonprofit, nonpartisan organization and does not endorse candidates.

VPC is dedicated to increasing the share of unmarried women, minorities, Millennials, and other historically under-represented groups in the electorate.

Sources and Methods: The Current Population Survey

- Unless noted, all of the data in this report are from the Current Population Survey (CPS), the November 2016 CPS supplements on voting and registration and the March 2016 CPS supplements on income.
  - The CPS is a monthly survey of about 50,000 households conducted by the Bureau of the Census for the Bureau of Labor Statistics.
  - Information on reported voting and registration by various demographic and socioeconomic characteristics is collected by CPS in November of congressional and presidential election years.
- The CPS uses a multistage probability sample based on the results of the decennial census, with coverage in all 50 states and the District of Columbia. The sample is continually updated.
- Working class is defined as non-college.
- Median income is rounded to the nearest $1,000.
Sources and Methods: Calculating 2018 Drop-off

To estimate population in 2018, CPS counts of the Voting Eligible Population (VEP) were pulled from historic data.

- Data were divided by state and then into demographic subgroups of Latino, non-Latino Rising American Electorate (RAE), and non-RAE, as those populations are growing at different rates.

- A rolling average was calculated, such that each month’s data was represented by an average of that month and the 11 preceding months. This was done to smooth out random fluctuations in the data that were the result of sampling error. From these rolling averages, the monthly increase in population was estimated and multiplied by 24 to give an estimate of the increase in population between November 2016 and November 2018.

- Data was then summed by state and by demographic subgroup to produce total national estimates.
The Rising American Electorate (RAE) – unmarried women, Millennials (ages 18-34)*, and minorities (as defined by the Census) – now accounts for more than half of the Vote Eligible Population (VEP) in this country (59.2%).

The Vote Eligible Population (VEP) refers to eligible citizens 18 and over.

While RAE turnout has increased in recent elections, the RAE still do not register to vote or turn out in proportion to their share of the population.

*Millennials are defined as citizens coming of age during 2000 and in subsequent years, i.e., born in or after 1982. Using this definition, the 2016 data in this presentation includes those up to age 34, while all data prior to 2016 in this presentation includes adults who are older in the present-day, as “Millennials” is a moving generation range. Although voters may have aged out of the current Millennial definition, their voting behaviors may continue to align with this group, and special attention should still be given to this generation of younger, millennial voters.
Key Findings from 2016

- In 2016, there were nearly 133 million eligible voters in the RAE. This comprised 59.2% of the VEP in the country.

- Although they accounted for nearly six in ten eligible voters in 2016, RAE voters made up barely half (52.6%) of the total electorate in 2016. This was the first time in history that the RAE comprised the majority of the electorate.

- While the number of RAE voters increased by more than 8 million in 2012 to 2016, the number of non-RAE voters decreased by 3.5 million.

- In 2004 (VPC's first cycle), RAE were 44.6% of VEP; by 2016, they had grown to 59.2% of VEP. The non-RAE were 55.4% of VEP in 2004 and 40.8% of VEP in 2016.

- Turnout in 2016 was higher than turnout in 2012 among all RAE groups, except for African American voters.

Source: CPS November 2016
Key Findings from 2018 Drop-off

- One in three RAE voters who turned out in 2016 will not turn out in 2018.

- The predicted drop-off among non-RAE voters is only 22.1% or 14.4 million voters. In fact, of the approximately 40 million Americans predicted to drop-off in 2018, nearly two-thirds will come from the RAE. RAE drop-off is expected to be 35.1% or 25.4 million.

- Turnout is predicted to drop the most among Millennial voters and unmarried women. This trend was also true between 2008 and 2014.

- Among key 2018 states, Pennsylvania, Indiana, West Virginia, and Nevada are expected to see the biggest drop-off rates among RAE voters.

**Source:** CPS November 2016
Key Demographic Findings

- A large registration gap continues to obstruct members of the RAE from voting. While only 21.9% of the non-RAE reports not being registered, the RAE has a 35% unregistered rate, with even higher unregistered percentages among Latinos (42.7%), Asian Americans (43.7%), and Millennials (39.3%).

- For the first time in history, in 2016, a majority of vote eligible women were unmarried. However, turnout among unmarried women dropped from 57.8% in 2012 to 57.0% in 2016.

- An important trend to watch is the growing use of vote-by-mail and mail-in registration as a method for engaging Latino and Asian American voters; 32.3% of Asian Americans voted by mail.

- A very large share (42.6%) of the RAE moved since the previous presidential election, highlighting the importance of re-registration. The most mobile group here is Millennials (54.6%).

- The RAE are less likely to own homes, less likely to receive a pension from their employer, and more likely to live below the poverty line than their non-RAE counterparts.

Source: CPS November 2016
The Rising American Electorate in 2016
In 2016, there were nearly 133 million unique individuals comprising the Rising American Electorate. Unmarried women and Millennials were far and away the largest segments, but there is much overlap between them.

133 million eligible voters (59.2% of the VEP) were in the Rising American Electorate.

Source: CPS November 2016
In 2016, the largest shares of the RAE were concentrated in the South and on the coasts, but the RAE was a significant share of the population in each state.

RAE Vote Change
National Vote Change: 2012-2016

- RAE Voters Gained: 12.6%
  - +8.1 million votes
- Non-RAE Voters Lost: -5.1%
  - -3.5 million votes

RAE VEP Population: 59.2%

Voter Distribution of the Electorate

Source: CPS November 2016
National Vote Change: 2012-2016

- Unmarried Women Voters Gained: +4.5%
  - +1.4 million votes
- African American Voters Lost: -3.9%
  - -694.4 thousand votes

- Latino Voters Gained: +13.4%
  - +1.5 million votes
- Millennial Voters Gained: +41.6%
  - +9.4 million votes

Source: CPS November 2016
In 2016, the RAE comprised a majority (52.6%) of the electorate for the first time in history. However, the gap between the RAE’s share of the VEP and share of the electorate has grown slightly from 2008 (5.2%) to 2016 (6.6%).

Source: CPS November 2016
The RAE is projected to be just over a majority of the electorate in 2018. The midterm RAE gap, between the VEP and electorate share, has not widened as dramatically as it has for presidential elections.

Source: CPS November 2016
RAE groups have increased dramatically as a share of the electorate in presidential elections since 2000. Not surprisingly, much of that growth has been fueled by Millennial voters. The non-RAE declined by almost 18 points from 2000 to 2016.*

*This growth, spurred largely by the growth of the Millennial subgroup, must be addressed. We will need to set a cutoff for Millennials and begin to explore Generation Z, or the RAE will continue to grow.

Source: CPS November 2016
Projected growth among Millennial and Latino voters could result in the non-RAE dipping just below 50% of voters in 2018 for the first time in an off-year election.

While the pace of change is slow, unmarried women have increased as a share of the electorate (from 21% in 2000 to 24% in 2016). Overall, unmarried voters increased their share of the electorate from 35% in 2000 to 41% in 2016.

Source: CPS November 2016
Breaking down gender, marital status and race, reveals the power of the married white voting bloc. Married white voters have fluctuated around 50% of the electorate, with slight bumps to their vote share in midterm elections.

Source: CPS November 2016
For the first time in history, in 2016, a majority of vote eligible women were unmarried.

Source: CPS November 2016
Unmarried women are projected to be 23% of voters in 2018. This is a 3 point increase from the mid-term election of 2002 and their highest share of the electorate ever in an off-year election.

Source: CPS November 2016
Of the unmarried women in the electorate, most are white unmarried women, followed by black unmarried women, Latina unmarried women, and lastly Asian unmarried women.

Share of Electorate

*We don’t run 2018 projections at this level of nesting of demographics.
Source: CPS November 2016
Married women are a larger share of the electorate than unmarried women, but that is changing. From 2000 to 2016 the gap between married and unmarried women as a share of the electorate moved from an 11.2 percent gap in 2000 to only a 5.2 percent gap in 2016.

*We don’t run 2018 projections at this level of nesting of demographics.

There has been a surge of RAE voters, and we expect this growth to continue.

- From 2012 to 2016, the national growth rate for the RAE was 12.6%, adding 8 million new RAE voters to the electorate.

- The number of unmarried women, African Americans, Latinos, and Millennials continues to grow, increasing their importance in the electorate year-after-year. This growth trajectory is likely true among Asian Americans as well, but this is the first year we have pulled data on this racial group.

- Key 2018 states with the highest growth included Nevada (139.2 thousand new RAE voters, 24.8% growth), West Virginia (72.5 thousand new RAE voters, 36.6% growth), Indiana (252.9 thousand new RAE voters, 25.1% growth), Colorado (250.8 thousand new RAE voters, 24.0% growth), and Arizona (271.4 thousand new RAE voters, 23.0% growth).

Voter drop-off in 2014 was least extreme among married white men and was most extreme among unmarried black women.
How Ballots Were Cast in 2016
In the aggregate, there was not a meaningful difference between the RAE and the Non-RAE in method of voting: the majority vote in person, with just one in five voting by mail.

How Votes Were Cast

</thead>
<tbody>
<tr>
<td>In Person</td>
<td>78.8%</td>
<td>78.4%</td>
</tr>
<tr>
<td>By mail</td>
<td>20.6%</td>
<td>21.3%</td>
</tr>
</tbody>
</table>

Source: CPS November 2016
African American women were the most likely to vote in person (88.6%), followed by Latinas (76.5%). Millennials were also highly likely to vote in person, while Asian Americans were the most likely group in the RAE to vote by mail.
Among working class men, African Americans were 10 points more likely to vote at the polls than any other group. Asian and Latino men were the most likely to vote by mail. This is likely driven by the high rates of mail voting in states like Hawaii, Washington, California, Arizona and Colorado where the population of these groups is high.

</tr>
</tbody>
</table>

Source: CPS November 2016
Voting by mail was less popular among Asian and Latino voters ages 30-49 than it was for younger or older voters of the same racial group.

How Votes Were Cast

Source: CPS November 2016
Voters over the age of 50 were the most likely to make vote by mail or absentee ballot, although in person voting was still used by the vast majority of voters, especially African American voters.

How Votes Were Cast

- **White 50 & over**: 75.6% In Person, 24.1% By Mail
- **African American 50 & over**: 86.4% In Person, 13.1% By Mail
- **Latino 50 & over**: 74.3% In Person, 25.3% By Mail
- **Asian 50 & over**: 64.1% In Person, 35.1% By Mail

Source: CPS November 2016
Unmarried women were somewhat more likely to vote by mail (22.1%) than other groups, while unmarried men were the most likely to vote at the polls (79.5%).

How Votes Were Cast

- Married Women: 78.9% In Person, 20.8% By Mail
- Unmarried Women: 77.1% In Person, 22.1% By Mail
- Married Men: 79.0% In Person, 20.7% By Mail
- Unmarried Men: 79.5% In Person, 19.9% By Mail

Source: CPS November 2016
Black married men were the most likely to vote in person, while Asian married men were the most likely to vote by mail.
Among married women, African Americans were most likely to vote in person and almost a third of Asian women voted by mail.

How Votes Were Cast

- Married White Women: 78.8% In Person, 20.9% By Mail
- Married Black Women: 88.5% In Person, 11.1% By Mail
- Married Latina Women: 76.8% In Person, 22.6% By Mail
- Married Asian Women: 69.1% In Person, 30.2% By Mail

Source: CPS November 2016
Ninety percent of unmarried black men voted in person while almost 40% of unmarried Asian men voted by mail.

Source: CPS November 2016
Millennials were the most likely to report being too busy or having a conflicting work schedule as their reason for not voting (19.3%), while African Americans were the most likely to cite not being interested or feeling like their vote wouldn’t count as their reason for not voting (18.6%). Latinos were the most likely to specifically say they didn’t like the candidates or issues (25.2%).

Source: CPS November 2016
Millennials were the most likely to report registration problems (6.1%) while African Americans were the most likely to report transportation problems (4.5%). Asians were the most likely to cite being out of town or away from home (11.0%).
White and African American working class voters were more likely to report illness or disability as an obstacle to voting. African American working class voters were the least likely to report dissatisfaction with the candidates and the most likely to feel their vote wouldn’t count.

Source: CPS November 2016
Working class Latinos were the most likely to report registration problems, while working class African Americans were most likely to cite transportation problems.

Reason for Not Voting

- **Registration problems (i.e. didn't receive absentee ballot, not registered in current location)**
  - White Working Class Men: 3.6%
  - African American Working Class Men: 4.0%
  - Latino Working Class Men: 3.1%
  - Asian Working Class Men: 4.0%

- **Transportation problems**
  - White Working Class Men: 2.3%
  - African American Working Class Men: 4.4%
  - Latino Working Class Men: 0.3%
  - Asian Working Class Men: 4.4%

- **Out of town or away from home**
  - White Working Class Men: 8.9%
  - African American Working Class Men: 7.8%
  - Latino Working Class Men: 7.0%
  - Asian Working Class Men: 8.2%

  - White Working Class Men: 1.9%
  - African American Working Class Men: 1.3%
  - Latino Working Class Men: 3.7%
  - Asian Working Class Men: 0.0%

Source: CPS November 2016
White and Latina working class women were more likely to report dissatisfaction with the candidates or campaign than their peers. Asian working class women were more likely to cite being too busy.

Reason for Not Voting

- Too busy, conflicting work or school schedule
- Illness or disability (own or family's)
- Not interested, felt my vote wouldn't count
- Didn't like candidates or campaign issues
- Forgot to vote (or send in absentee ballot)

Source: CPS November 2016
Asian working class women were the most likely to cite being out of town. African American working class women mention transportation problems.
Young African American voters were the most likely to report a lack of interest in the election, although they were less likely to say that was because they didn’t like the candidates. Young Latinos are the most likely to cite being too busy.

Source: CPS November 2016
Young Asian Americans were twice as likely to say being out of town was a conflict for voting.

**Reason for Not Voting**

- Registration problems (i.e. didn't receive absentee ballot, not registered in current location): 7.0% (White under 30), 5.9% (African American under 30), 6.3% (Latino under 30), 6.6% (Asian American under 30), 0.5% (Other), 0.0% (None)
- Transportation problems: 2.2% (White under 30), 2.0% (African American under 30), 0.5% (Latino under 30), 0.0% (Asian American under 30)
- Out of town or away from home: 21.5% (White under 30), 12.3% (African American under 30), 10.1% (Latino under 30), 6.6% (Asian American under 30)
- Inconvenient hours, polling place or hours or lines too long: 2.1% (White under 30), 2.2% (African American under 30), 4.2% (Latino under 30), 2.1% (Asian American under 30)

Source: CPS November 2016
Middle-aged Asians were more likely to cite a busy work schedule and that they forgot to vote. Middle-aged whites and Latinos talk more about not liking the candidate.

**Reason for Not Voting**

- Too busy, conflicting work or school schedule: 18.7% (White), 16.7% (African American), 23.5% (Latino), 17.7% (Asian)
- Illness or disability (own or family's): 6.4% (White), 5.8% (African American), 4.3% (Latino), 5.2% (Asian)
- Not interested, felt my vote wouldn't count: 20.8% (White), 19.8% (African American), 19.8% (Latino), 21.3% (Asian)
- Didn't like candidates or campaign issues: 27.6% (White), 24.5% (African American), 27.1% (Latino), 21.3% (Asian)
- Forgot to vote (or send in absentee ballot): 2.4% (White), 2.2% (African American), 2.4% (Latino), 5.0% (Asian)

Source: CPS November 2016
Middle-aged Latinos were the most likely to have registration problems, while middle-aged African American voters had transportation problems. Middle aged whites were the most likely to be out of town; this is a change in trends from voters under 30, of whom Asians were far more likely to be out of town (21.5%).

### Reason for Not Voting

- **Registration problems (i.e. didn't receive absentee ballot, not registered in current location)**
  - White 30-49: 4.9%
  - African American 30-49: 2.2%

  - Unmarried Women: 6.4%
  - Married Men: 10.9%
  - Unmarried Men: 9.2%

- **Inconvenient hours, polling place or hours or lines too long**
  - Married Women: 1.9%
  - Unmarried Women: 2.0%
  - Married Men: 2.6%
  - Unmarried Men: 2.1%

Source: CPS November 2016
Looking at the breakout of gender, marital status and race, Asian married men were the most likely to feel their vote would not count. This trend was not followed by either unmarried Asian men or married Asian women, and is unique to this cohort.
Among married men, African American married men are the most likely to be out of town or away from home. This is unique to married black men. Married black women are the least likely to be out of town (among married women).

### Reason for Not Voting

- **Out of town or away from home**
  - Married White Men: 11.2%
  - Married Black Men: 14.1%
  - Married Latino Men: 8.2%
  - Married Asian Men: 7.8%

- **Inconvenient hours, polling place or lines too long**
  - Married White Men: 2.8%
  - Married Black Men: 4.3%
  - Married Latino Men: 2.3%
  - Married Asian Men: 1.3%

Source: CPS November 2016
White married women were the most likely, among all groups in the race/marital status/gender breakout, to not vote because of a dislike for the candidates and campaign issues. Asian married women were also the most likely to be too busy or have a conflicting work schedule.

Source: CPS November 2016
Among married women, Asian women were the most likely to cite being out of town or away from home as a reason for not voting. This matches trends among unmarried Asian women and unmarried Asian men, and is inverse to trends among married Asian men who were the least likely among married men to be out of town on Election Day.

Among all unmarried men, with the exception of African American unmarried men, “didn’t like candidate or campaign issues” was the top reason for not voting. For black unmarried men, the top reason was a lack of interest and a feeling that their vote wouldn’t count.

**Reason for Not Voting**

- **Too busy, conflicting work or school schedule**
  - Unmarried White Men: 14.2%
  - Unmarried Black Men: 14.2%
  - Unmarried Latino Men: 14.0%
  - Unmarried Asian Men: 18.0%

- **Illness or disability (own or family’s)**
  - Unmarried White Men: 8.1%
  - Unmarried Black Men: 8.0%
  - Unmarried Latino Men: 6.1%
  - Unmarried Asian Men: 2.6%

- **Not interested, felt my vote wouldn’t count**
  - Unmarried White Men: 16.4%
  - Unmarried Black Men: 21.9%
  - Unmarried Latino Men: 19.0%
  - Unmarried Asian Men: 12.3%

- **Didn’t like candidates or campaign issues**
  - Unmarried White Men: 26.7%
  - Unmarried Black Men: 19.5%
  - Unmarried Latino Men: 26.0%
  - Unmarried Asian Men: 27.2%

- **Forgot to vote (or send in absentee ballot)**
  - Unmarried White Men: 2.7%
  - Unmarried Black Men: 4.3%
  - Unmarried Latino Men: 2.9%
  - Unmarried Asian Men: 8.2%

Source: CPS November 2016
Unmarried Asian men were the most likely to say that being out of town or away from home was the reason they did not vote. African American unmarried men were the most likely to cite transportation issues – a trend that is disproportionately true for blacks across marital status and gender lines.

Source: CPS November 2016
White unmarried women were more likely that any other group to cite illness or disability (own or family’s) as a reason for not voting. Black unmarried women were the most like to feel their vote would not count.
Asian unmarried women were much more likely to cite being out of town or away from home as a reason for not voting. Asian and Latina unmarried women were more likely to cite registration problems.

Reason for Not Voting

- Registration problems (i.e. didn't receive absentee ballot, not registered in current location): 4.8% (Asian), 3.7% (Black), 5.9% (Latino), 6.2% (Asian)
- Transportation problems: 4.9% (Asian), 4.8% (Black), 1.4% (Latino), 2.0% (Asian)
- Out of town or away from home: 6.4% (Asian), 4.5% (Black), 7.6% (Latino), 14.6% (Asian)
- Inconvenient hours, polling place or hours or lines too long: 1.8% (Asian), 2.8% (Black), 4.1% (Latino), 0.0% (Asian)

Source: CPS November 2016
The same trend seen in married men is true in married women. Married white women were more likely to be registered and to vote than their minority counterparts, though married black women came close to the rates of married white women.

Source: CPS November 2016
Unmarried men were far less likely than their married male counterparts to be registered and to vote. Fifty-two percent of unmarried Latino men and unmarried Asian men were not registered to vote.

Source: CPS November 2016
While unmarried women were more likely to be registered and voting than their unmarried male counterparts, they still are far behind married women.

Source: CPS November 2016
In 2016, the RAE was underrepresented in the electorate relative to their share of all registered voters, while non-RAE voters were slightly over-represented.

Share of VEP vs. Share of Registered Voters vs. Share of Electorate

RAE
- Share of Vote Eligible Population: 59.2%
- Share of Registered Voters: 54.7%
- Share of Electorate: 52.6%

Non-RAE
- Share of Vote Eligible Population: 40.8%
- Share of Registered Voters: 45.3%
- Share of Electorate: 47.4%

Source: CPS November 2016
Most RAE groups represented a lower share of the electorate than their share of registered voters and a lower share of registered voters than their share of the VEP. This reinforces the importance of registration and turnout efforts among RAE groups.

Source: CPS November 2016
Married voters were a slightly larger share of the electorate than they were of registered voters. Unmarried voters, particularly unmarried men, display a larger gap between the electorate and registered voters.

Share of VEP vs. Share of Registered Voters vs. Share of Electorate

Source: CPS November 2016
Married white men were disproportionately represented in the electorate. Black married men were also slightly more represented in the electorate than in the vote eligible population, but this is not as extreme as the overrepresentation of white married men.

Share of VEP vs. Share of Registered Voters vs. Share of Electorate

<table>
<thead>
<tr>
<th></th>
<th>Share of Vote Eligible Population</th>
<th>Share of Registered Voters</th>

<td>1.2%</td>
</tr>
</tbody>
</table>

Source: CPS November 2016
The trends of married women were similar to those of married men. White married women were largely overrepresented in the electorate. Black married women were slightly overrepresented.

Source: CPS November 2016
Among all racial groups, unmarried men were underrepresented in the population of registered voters and in the electorate.

Share of VEP vs. Share of Registered Voters vs. Share of Electorate

Source: CPS November 2016
Among all racial groups, with the exception of African Americans, unmarried women were underrepresented in the electorate. Unmarried black women make up the same share of the electorate as they do the vote eligible population.

![Chart showing share of vote eligible population, registered voters, and electorate for different groups.

Source: CPS November 2016]
Voters who were not part of the RAE were more likely to have registered to vote at a town hall or government office.

Method of Registration

- **DMV**: 26.2% (RAE) vs. 24.7% (Non-RAE)
- **Town hall or county/government registration office**: 13.1% (RAE) vs. 22.0% (Non-RAE)
- **By mail**: 12.9% (RAE) vs. 11.5% (Non-RAE)
- **School, hospital, or on campus**: 6.7% (RAE) vs. 3.2% (Non-RAE)

Source: CPS November 2016
RAE voters were much more likely to report having registered online.

Method of Registration

- Registration drive: 4.5% RAE, 3.2% Non-RAE
- Online: 8.1% RAE, 4.2% Non-RAE
- Public assistance agency: 1.6% RAE, 0.4% Non-RAE
- Polling place: 5.2% RAE, 6.5% Non-RAE

Source: CPS November 2016
Asian Americans and Latinos were the most likely to register by mail, while Millennials were the most likely to register at the DMV or at a school or campus.
Millennials were the most likely to register through online methods. African Americans and Latinos had a greater chance of registering at a registration drive than other demographic groups.

Source: CPS November 2016
White working class men were much more likely to register to vote at a government office than Latino or Asian working class men, who were more likely to register by mail.

Similar to married white men, married white women were more likely to register at a government building; and, similar to married Asian men, married Asian women were more likely to register by mail.

Method of Registration

Source: CPS November 2016
Married Latina women were more likely to register online, married white women were more likely to register at a polling place, and married black women were more likely to register at a registration drive.

Source: CPS November 2016
The DMV was the most common place unmarried men to register, and this was disproportionately true for Asian unmarried men. Unmarried Latino men were also likely to register to vote by mail and unmarried black men were more likely than other subgroups to register to vote at a school.

Source: CPS November 2016
Unmarried Asian men registered to vote online more than their counterparts and unmarried black men were the more likely to use a registration drive to register.

Source: CPS November 2016
Unmarried white women were the most likely among their counterparts to register at a government building, and unmarried Asian women were more likely to register by mail.
Unmarried Asian women registered to vote online more than any other group in this marital status/gender/race breakout, and unmarried black women were more likely than any other group in this breakout to have registered at a registration drive.

Source: CPS November 2016
Non-RAE members cited a lack of interest in the election (48.0% compared to 39.6% for RAE members) as an explanation for not registering. This could be because non-RAE members reported lower numbers than the RAE regarding administrative hurdles, suggesting that not registering to vote is a choice for the non-RAE, rather than an inability.

### Reason for Not Registering to Vote

<table>

Source: CPS November 2016
Overall, the reasons cited by members of the RAE are associated with administrative hurdles, such as language, knowledge about where to register, or residency requirements.

Reason for Not Registering to Vote

Source: CPS November 2016
Millennials were the most likely to cite a lack of interest (41.1%) and were also the most likely to miss registration deadlines (16.2%). Latinos were the most likely to cite eligibility issues (12.2%).

Source: CPS November 2016
African Americans were mostly likely to cite illness or disability as an obstacle to registering (6.2%), while Asian Americans cited difficulty with English (9.8%).

Reason for Not Registering to Vote

Source: CPS November 2016
White working class men were more likely than their counterparts to cite a lack of interest in voting. African American working class men were the most likely to face obstacles around eligibility to vote.

Source: CPS November 2016
White and African American men expressed similar challenges with illness or disability, while Asian working class men were by far the most likely to cite difficulty with English.

Reason for Not Registering to Vote

- **White Working Class Men**: Did not know where or how to register - 2.7%, Did not meet residency requirements/did not live there long enough - 1.8%, Permanent illness or disability - 5.5%, Difficulty with English - 9.7%
- **African American Working Class Men**: Did not know where or how to register - 2.2%, Did not meet residency requirements/did not live there long enough - 2.1%, Permanent illness or disability - 5.6%, Difficulty with English - 3.2%
- **Latino Working Class Men**: Did not know where or how to register - 4.3%, Did not meet residency requirements/did not live there long enough - 3.9%, Permanent illness or disability - 2.6%, Difficulty with English - 1.3%
- **Asian Working Class Men**: Did not know where or how to register - 4.0%, Did not meet residency requirements/did not live there long enough - 4.3%, Permanent illness or disability - 1.3%, Difficulty with English - 9.7%

Source: CPS November 2016
Like their male counterparts, white working class women were the most likely to cite a lack of interest in voting.

Reason for Not Registering to Vote

Source: CPS November 2016
Asian working class women were by far the most likely to cite difficulty with English as a reason for not registering to vote.

Reason for Not Registering to Vote

- Did not know where or how to register
- Did not meet residency requirements/did not live there long enough
- Permanent illness or disability
- Difficulty with English

Source: CPS November 2016
White voters under the age of 30 were the least likely to report concerns that they were not eligible to vote.
Young Asian Americans were the most likely to cite a failure to meet residency requirements as an explanation for not registering to vote. Younger Latinos did not know where and how to register.

**Reason for Not Registering to Vote**

- **Did not know where or how to register**
  - White under 30: 4.1%
  - African American under 30: 2.3%
  - Latino under 30: 5.3%
  - Asian American under 30: 4.1%

- **Did not meet residency requirements/did not live there long enough**
  - White under 30: 2.9%
  - African American under 30: 1.8%
  - Latino under 30: 2.4%

- **Permanent illness or disability**
  - White under 30: 2.8%
  - African American under 30: 4.2%
  - Latino under 30: 2.3%
  - Asian American under 30: 0.3%

- **Difficulty with English**
  - White under 30: 1.3%
  - African American under 30: 1.6%
  - Latino under 30: 2.0%

Source: CPS November 2016
White middle-aged voters were more likely to report ambivalence about their interest in the election.

Reason for Not Registering to Vote

- **Not interested in the election or not involved in politics**
  - White 30-49: 45.8%
  - African American 30-49: 36.1%
  - Latino 30-49: 36.5%
  - Asian 30-49: 34.3%

- **My vote would not make a difference**
  - White 30-49: 5.4%
  - African American 30-49: 5.8%
  - Latino 30-49: 5.3%
  - Asian 30-49: 2.9%

- **Did not meet registration deadlines**
  - White 30-49: 12.3%
  - African American 30-49: 8.9%

- **Not eligible to vote**
  - White 50 & over: 4.1%
  - African American 50 & over: 9.4%
  - Latino 50 & over: 13.2%
  - Asian 50 & over: 9.8%

Source: CPS November 2016
Concerns about English proficiency were very high for Asian voters over the age of 50. Older African American voters were the most likely to cite permanent illness or disability as their reason for not voting.

Reason for Not Registering to Vote

- **White 50 & over**
  - Did not know where or how to register: 2.3%
  - Did not meet residency requirements/did not live there long enough: 1.3%
  - Permanent illness or disability: 8.8%
  - Difficulty with English: 17.4%

- **African American 50 & over**
  - Did not know where or how to register: 2.4%
  - Did not meet residency requirements/did not live there long enough: 1.3%
  - Permanent illness or disability: 11.0%
  - Difficulty with English: 1.3%

- **Latino 50 & over**
  - Did not know where or how to register: 4.2%
  - Did not meet residency requirements/did not live there long enough: 3.5%
  - Permanent illness or disability: 7.7%
  - Difficulty with English: 6.2%

- **Asian 50 & over**
  - Did not know where or how to register: 3.8%
  - Did not meet residency requirements/did not live there long enough: 4.5%
  - Permanent illness or disability: 3.4%
  - Difficulty with English: 1.1%

Source: CPS November 2016
Unmarried voters were somewhat less likely to express concern that their vote wouldn’t make a difference. But unmarried men were the most likely to report being ineligible to vote.

### Reason for Not Registering to Vote

- **Married Women**
  - Did not meet registration deadlines: 12.0%
  - Not eligible to vote: 6.8%
- **Unmarried Women**
  - Did not meet registration deadlines: 12.7%
  - Not eligible to vote: 6.0%
- **Married Men**
  - Did not meet registration deadlines: 12.2%
  - Not eligible to vote: 7.3%
- **Unmarried Men**
  - Did not meet registration deadlines: 11.8%
  - Not eligible to vote: 9.2%

Source: CPS November 2016
Unmarried men and women were more than twice as likely as married men and women to report illness or disability as an obstacle to registering to vote.

Reason for Not Registering to Vote

- Married Women
- Unmarried Women
- Married Men
- Unmarried Men

- Did not know where or how to register: Married Women 3.3%, Unmarried Women 3.8%, Married Men 2.9%, Unmarried Men 3.1%
- Did not meet residency requirements/did not live there long enough: Married Women 2.9%, Unmarried Women 2.4%, Married Men 2.6%, Unmarried Men 2.8%
- Permanent illness or disability: Married Women 2.7%, Unmarried Women 7.1%, Married Men 2.2%, Unmarried Men 6.0%
- Difficulty with English: Married Women 3.1%, Unmarried Women 2.0%, Married Men 2.0%, Unmarried Men 1.1%

Source: CPS November 2016
Not being interested in elections or politics was a top reason for not voting among married men of all races. Close to 15% of black and Latino married men cited eligibility issues as a reason for not voting.

Reason for Not Registering to Vote

- **Married White Men**: 47.6%
- **Married Black Men**: 40.6%
- **Married Latino Men**: 32.8%
- **Married Asian Men**: 37.8%

- **Not interested in the election or not involved in politics**: 6.4%
- **My vote would not make a difference**: 2.8%
- **Did not meet registration deadlines**: 11.0%
- **Not eligible to vote**: 15.8%

Source: CPS November 2016
Ten percent of married Asian men cited difficulty with English as their reason for not voting.

Reason for Not Registering to Vote

- Married White Men
- Married Black Men
- Married Latino Men
- Married Asian Men

Did not know where or how to register:
- Married White Men: 2.6%
- Married Black Men: 3.0%
- Married Latino Men: 3.6%
- Married Asian Men: 3.2%

Did not meet residency requirements/did not live there long enough:

The RAE and the Economy
Over 50% of Latinos are earning less than $35,000 per year, while over 70% of Asian Americans are earning more than $35,000 per year.

This data is among all adults (18+), not just VEP.
Source: CPS March 2016
Average median income for unmarried women is $35K, compared to $45K among all adults and $40K among all women. Unmarried women are disproportionately at the lower end of income brackets.

This data is among all adults (18+), not just VEP.
Source: CPS March 2016
In 2016, unmarried women made nominally more at $35,360 but just 59 cents on the dollar relative to married men. By way of contrast, income among married women has increased from $41,600 in 2015 (74 cents on the dollar compared to married men) to $45,000, which now represents 75 cents on the dollar.
Women make eighty cents for every dollar a man makes. White women make slightly more than this amount, while African American women and Latinas make less. Asian women come the closest to men’s personal earnings, falling just four cents short.

**Personal Earnings Among Full Time Workers – Median Income**

- Men: $50,000 ($1.00)
- Women: $40,000 ($0.80)
- White Women: $43,000 ($0.86)
- African American Women: $35,000 ($0.70)
- Latina Women: $30,000 ($0.60)
- Asian Women: $45,000 ($0.96)

This data is among all adults (18+), not just VEP. Source: CPS March 2016
The March 2016 data revealed that 20.7% of African Americas (18+) live below the poverty line. In comparison, only 8.7% of Asian Americans live in poverty, with Millennials and Latinos falling in between.

This data is among all adults (18+), not just VEP.

Source: CPS March 2016
Unmarried women are four times more likely to live in poverty than a married men.

This data is among all adults (18+), not just VEP. Source: CPS March 2016
Millennials and African Americans have the lowest levels of home ownership, with large portions of these demographic groups renting rather than purchasing their homes. Whites heavily outpace every other racial group in home ownership.

This data is among all adults (18+), not just VEP.
Source: CPS March 2016
Married men and women are far more likely to own a home than unmarried men and women.
